Weekly Assignment 3: Recreate GUVI.in Homepage using HTML & CSS

Objective:

To practice and enhance your skills in structuring a webpage with HTML and styling it with CSS by recreating the homepage of **GUVI.**

Guidelines:

1. **Structure**:
   - Use **HTML5** to create the structure of the webpage.
   - Focus on building a similar layout with semantic elements such as `header`, `nav`, `section`, `footer`, etc.
2. **Design**:
   - Use **CSS** for styling. Your goal is to match the visual design, including:
     - Navigation Bar (with logo and links)
     - Hero Section (with background image and text)
     - Courses/Featured Sections
     - Footer
   - You can inspect the original site to view the color codes, fonts, and layout.
3. **Media Queries**:
   - Implement **basic responsiveness** so the page adjusts well to different screen sizes (desktop, tablet, and mobile).
4. **Assets**:
   - For images and icons, you may download similar ones from royalty-free websites or take screenshots. Ensure that the images are appropriately scaled to fit the design.

Steps to Follow:

1. **Analyze** the GUVI homepage: Study the layout, sections, and overall design.
2. **Create the HTML** structure first.
3. **Style with CSS** to match the layout, fonts, and colors as closely as possible.
4. Test the website to ensure responsiveness.

Deliverables:

- Submit your project folder which includes:
  - **index.html**
  - **styles.css**
  - Any required images (stored in an `assets` or `images` folder)

Deadline: Submit your completed project by **25th Sept 24**.
